Oral medicines that restore the gut barrier

The Unmet Need

- Inflammatory bowel disease (IBD) affects 6.8 million people worldwide, and annual direct costs of IBD care exceed $25 billion in the US.
- Up to 40% of patients lose response to biologic therapy within the first year, and no approved therapy directly repairs the damaged intestinal barrier.
- Barrier damage persists in many patients in clinical remission and predicts relapse, leaving a root cause of disease unaddressed.

Science & Approach

- HT-101 is an oral, gut-restricted small molecule designed to restore tight-junction integrity, targeting the epithelial barrier rather than suppressing the immune system.
- Designed as a once-daily oral tablet for use alone or alongside existing biologics; minimal systemic exposure has been observed in preclinical models.

Pipeline

- HT-101 (ulcerative colitis): IND-enabling.
- HT-102 (Crohn's disease): lead optimization. HT-201 (celiac disease): discovery.
- IND submission for HT-101 is planned for Q3 2026, with a Phase 1 trial expected to begin in Q1 2027.

Market Opportunity

- **TAM** $22.4B global IBD therapeutics market (2025).
- **SAM** $6.1B in moderate-to-severe ulcerative colitis, US and EU5.
- **SOM** $610M projected peak annual sales at a 10% share of SAM.

Key Milestones

- Completed GLP toxicology studies in two species.
- 62% reduction in intestinal permeability in a DSS mouse model (n=24).
- Awarded a $3.2M NIH SBIR Phase II grant in 2024.
- Selected a GMP drug substance manufacturing partner.
- Composition-of-matter patent granted in the US, expiring 2041.

Leadership

- **Dr. Maya Okafor**, CEO - former VP Clinical Development at Arcadia Pharma; 15 years in GI drug development.
- **Dr. Daniel Reyes**, CSO - inventor of the barrier-restoration platform; PhD, Stanford University.
- **Priya Natarajan**, CFO - former biotech investment banker; led 2 IPOs.
- **Dr. Samuel Ortiz**, CMO - gastroenterologist; led 4 Phase 2 IBD trials.

Series A Financing

- **Raising a $15M Series A, providing 24 months of runway through Phase 1 data readout.**
- Use of funds: 55% IND-enabling studies and Phase 1 trial; 25% CMC and manufacturing scale-up; 20% team and operations.
